Graphs of Sine and Cosine Functions

Amplitude, period, and midline

1 For the function $y = 3\sin(2x)$, state:

a the amplitude **b** the period **c** the range

2 For the function $y = -2\cos\left(\frac{x}{2}\right) + 1$, state:

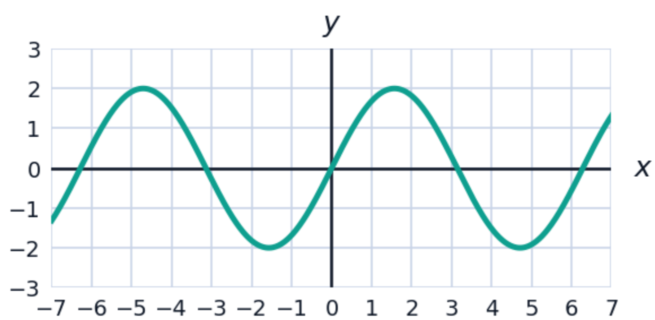
a the amplitude **b** the period

c the midline **d** the range

3 For $y = \sin\left(x - \frac{\pi}{3}\right)$, state the phase shift and the period.

Reading and writing equations from graphs

4 The graph below shows one sinusoidal function. State its amplitude and period, then write an equation for the function.



5 Write an equation of a cosine function with amplitude 4, period π, reflected across the x-axis, with no phase or vertical shift.

6 The depth of water at a harbour entrance is modeled by $d(t) = 2.5\sin\left(\frac{\pi}{6}t\right) + 7$ metres, where t is in hours after midnight.

a State the maximum and minimum depths.

b State the period of the tide cycle.

c Find the depth at $t = 3$.
