Function transformations

1 How should you translate the graph of $y = f(x)$ to get the graph of $y = f(x) + 4$?

2 How should you translate the graph of $y = g(x)$ to get the graph of $y = g(x + 6)$?

3 Describe the shift required to transform the graph of $y = a^x$ to get the graph of $y = a^{(x+5)}$.

4 For each of the following equations, determine what the new equation is when their graphs are moved as described:

a The graph of $y = 4x$ is moved up by 2 units.

b The graph of $y = x^3$ is moved to the right by 10 units.

c The graph of $y = 2^x$ is moved down by 9 units.

5 Suppose that the x-values of the x-intercepts of the graph of $y = f(x)$ are -5 and 6. Find the corresponding x-values of the x-intercepts of the graph of:

a $y = f(x + 4)$ **b** $y = f(x - 4)$ **c** $y = 3f(x)$ **d** $y = f(-x)$

6 State the vertical stretch factor of:

a $y = 4x^3$ **b** $y = -4x^4$ **c** $y = 3x^5$ **d** $y = -5x^2$

7 Consider the function $f(x) = x^2 - 5$. Using function notation, describe the transformation of f that will result in the function:

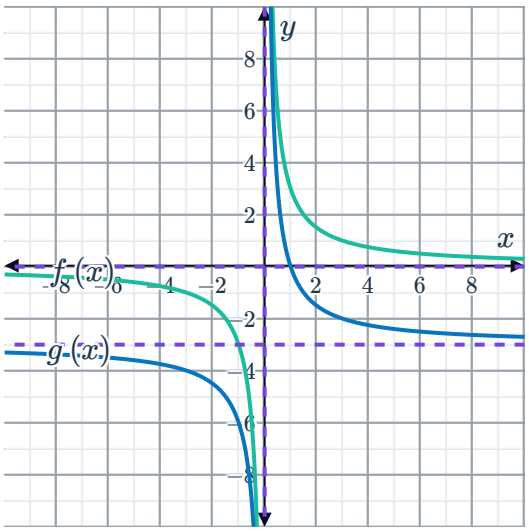

a $g(x) = x^2 - 6$ **b** $h(x) = 16x^2 - 5$ **c** $k(x) = 3x^2 - 15$

8 Consider the graphs of $f(x) = \dfrac{3}{x}$ and $g(x)$:

a Write $g(x)$ in terms of $f(x)$.

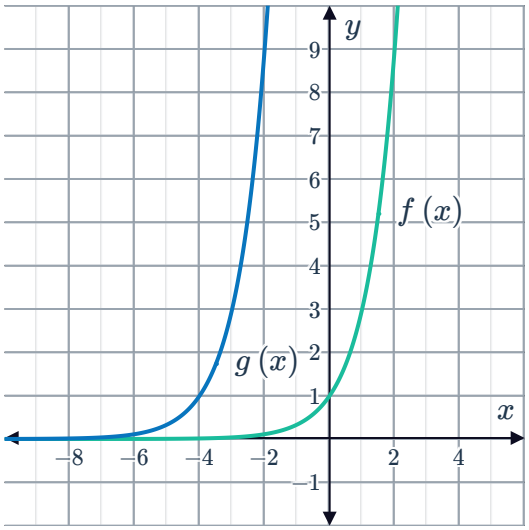

b State the equation of $g(x)$.

9 Consider the graphs of $f(x) = 3^x$ and $g(x)$:

a Write $g(x)$ in terms of $f(x)$.

b State the equation of $g(x)$.

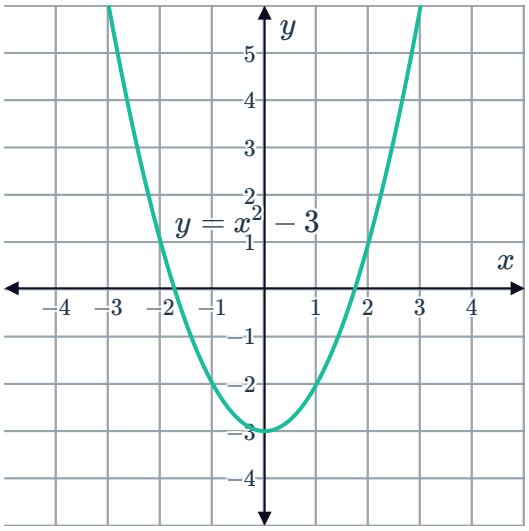

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

10 Consider the graph of $y = x^2 - 3$:

a Write down the new equation when the graph of $y = x^2 - 3$ is moved upwards by 5 units.

b Write down the new equation when the graph of $y = x^2 - 3$ is moved to the right by 3 units.

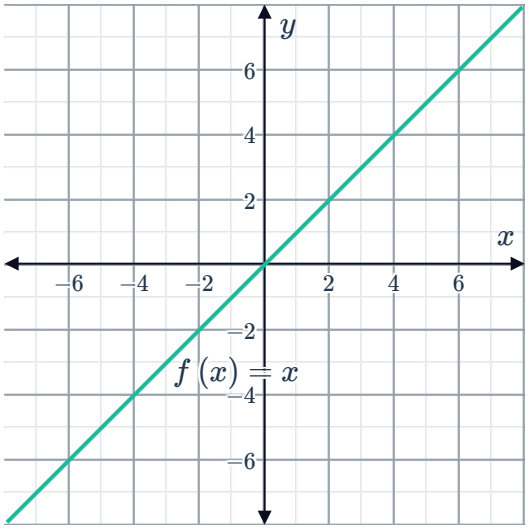

11 Consider the graph of $f(x) = x$.

a Write down the equation of the new function $g(x)$ which is formed by evaluating $f(x) + 4$.

b Sketch the graph of $y = g(x)$.

c Describe the transformation the graph of $f(x)$ undergone to become the graph of $g(x)$.

12 Consider the graph of $y = x^2$:

a

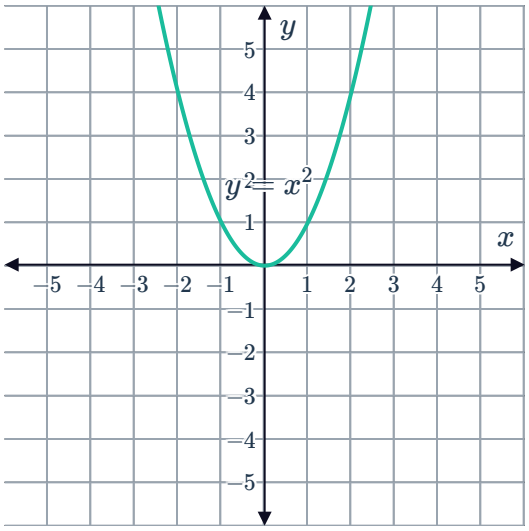

i Describe the transformation of the graph of $y = x^2$ that would obtain $y = x^2 - 3$.

ii Sketch the graph of $y = x^2 - 3$ on the same coordinate plane.

b

i Describe the transformation of the graph of $y = x^2$ that would obtain $y = (x - 2)^2$.

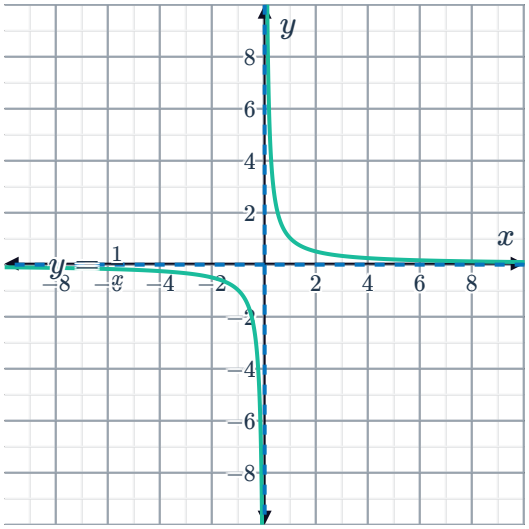

ii Sketch the graph of $y = (x - 2)^2$ on the same coordinate plane.

13 Consider the graph of $y = \frac{1}{x}$:

a Describe the transformation of the graph of $y = \frac{1}{x}$ that would obtain $y = \frac{1}{x + 2}$.

b Sketch the graph of $y = \frac{1}{x + 2}$ on the same coordinate plane.

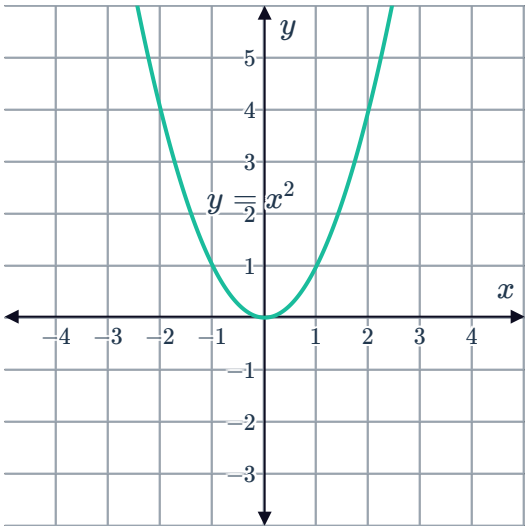

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

14 Consider the graph of $y = x^2$:

a Describe the transformation of the graph of $y = x^2$ that would obtain $y = (x-2)^2$.

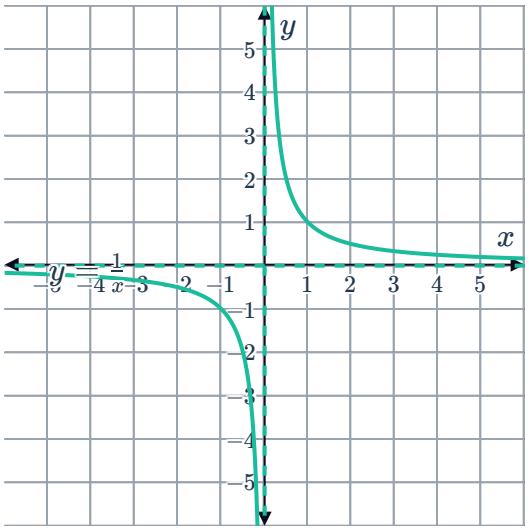

b Sketch the graph of $y = (x-2)^2$.

15 Consider the graph of $y = \frac{1}{x}$:

a Describe the transformation of the graph of $y = \frac{1}{x}$ that would obtain $y = \frac{1}{x} + 3$.

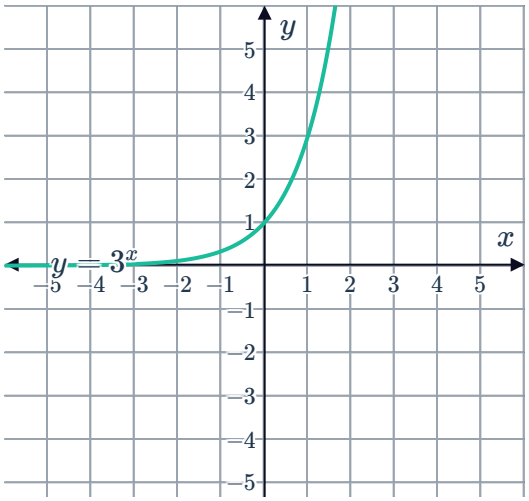

b Sketch the graph of $y = \frac{1}{x} + 3$.

16 Consider the graph of $y = 3^x$:

a Describe the transformation of the graph of $y = 3^x$ that would obtain $y = 3^x - 4$.

b Sketch the graph of $y = 3^x - 4$.

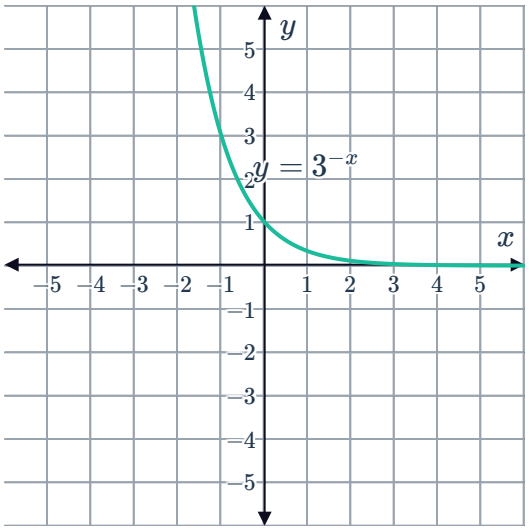

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

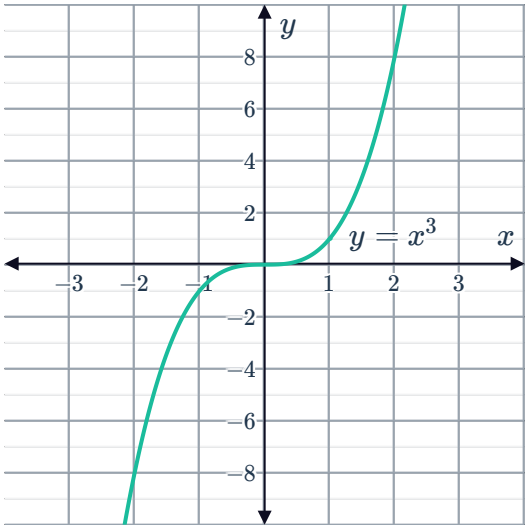

17 Consider the graph of $y = 3^{-x}$:

a Describe the transformation of the graph of $y = 3^{-x}$ that would obtain $y = 3^{-x} + 2$.

b Sketch the graph of $y = 3^{-x} + 2$.

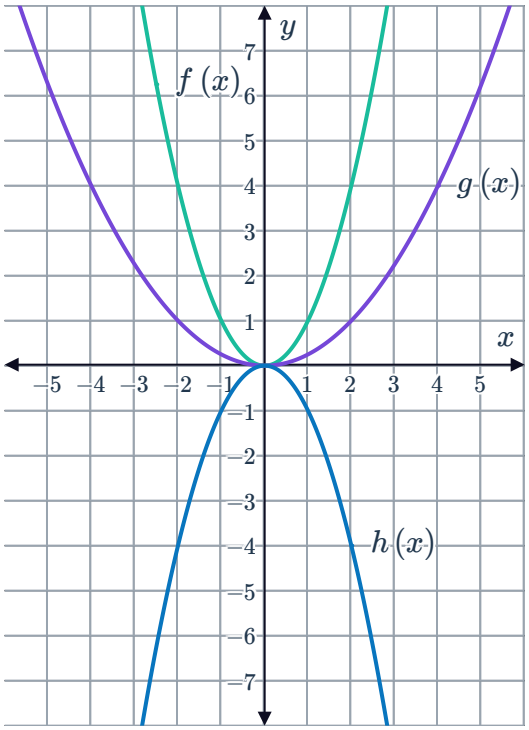

18 Consider the graph of $y = x^3$:
Sketch the graph after it has undergone transformations resulting in the function $y = x^3 - 4$.

19 Three functions have been graphed on the coordinate plane. $g\left(x\right)$ and $h\left(x\right)$ are both transformations of $f\left(x\right)$.

a State the equation of $f\left(x\right)$.

b Write $g\left(x\right)$ in terms of $f(x)$ using the transformation shown in the graph.

c State the equation of $g\left(x\right)$.

d Write $h\left(x\right)$ in terms of $f(x)$ using the transformation shown in the graph.

e State the equation of $h\left(x\right)$.

Multiple transformations

20 Describe the transformations that have occured from $f(x)$ to $g(x)$:

a From $f(x)=x^4$ to $g(x)=-5x^4+8$

b From $f(x)=x^4$ to $g(x)=-7\left(x+4\right)^4$

c From $f(x)=x^2$ to $g(x)=-10\left(x+8\right)^2-9$

21 The graph of $y=-x^2$ is moved to the right by 6 units and upwards by 5 units. What is the new equation of the graph?

22 Suppose that $(-4,3)$ is a point on the graph of $y=g\left(x\right)$. Find the corresponding point on the graph of:

a $y=g\left(x+7\right)-6$

b $y=-6g\left(x-4\right)+6$

c $y=g\left(6x+1\right)$

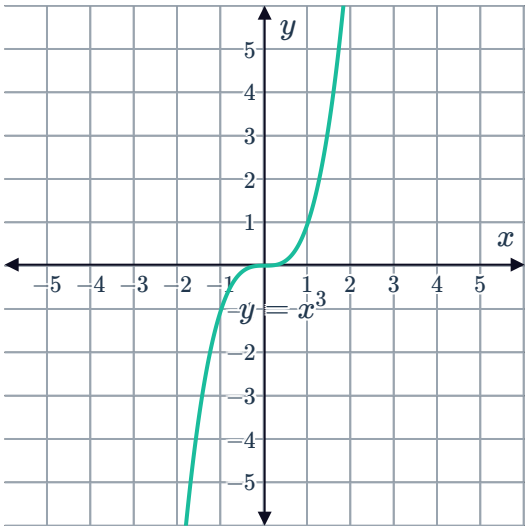

23 Consider the function $f\left(x\right)=\sqrt{x}$. Write down the new function $g\left(x\right)$ which results from compressing $f\left(x\right)$ vertically by a factor of $\frac{1}{3}$, and compressing horizontally by a factor of $\frac{1}{2}$.

24 Consider the graph of $y = x^3$:

a Describe the transformation of the graph of $y = x^3$ that would obtain $y = (x + 2)^3 + 4$.

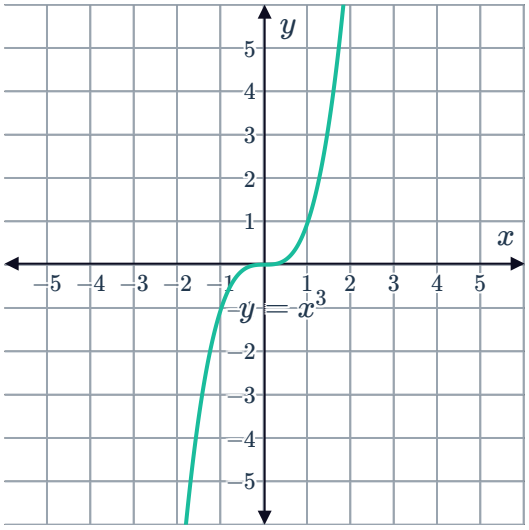

b Sketch the graph of $y = (x + 2)^3 + 4$.

25 Consider the graph of $y = x^3$:

a Describe the transformation of the graph of $y = x^3$ that would obtain $y = (x - 2)^3 - 3$.

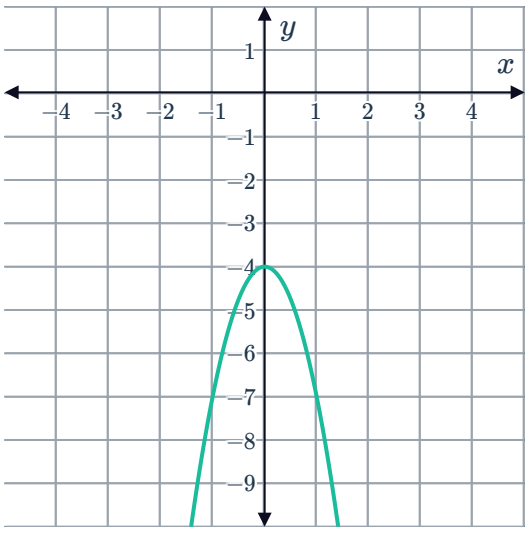

b Sketch the graph of $y = (x - 2)^3 - 3$.

26 Consider the following graph:

a Describe the transformations of the graph of $y = x^2$ to the given graph.

b Write down the equation of the given graph.

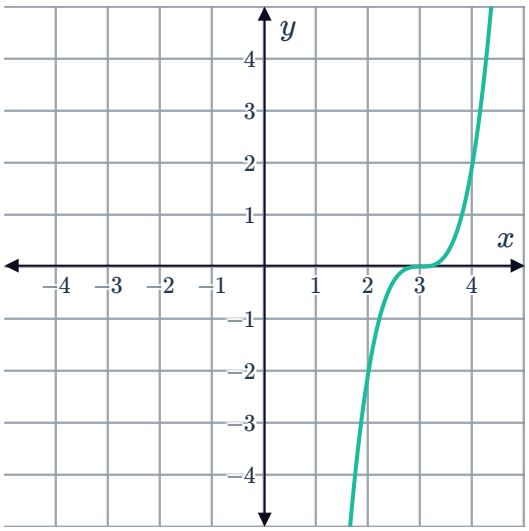

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

27 For each of the following graphs:

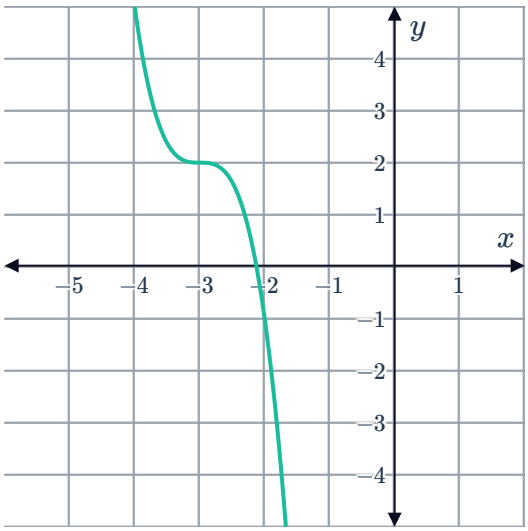

i Describe the transformations of the graph of $y = x^3$ to the given graph.

ii Write down the equation of the given graph.

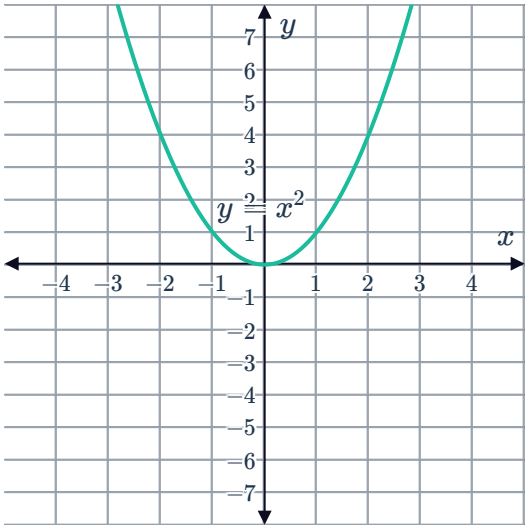

a

b

28 Consider the graph of $y = x^2$:
Sketch the graph after it has undergone transformations resulting in the function $y = 4x^2 - 2$.

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

29 Consider the function $f(x) = \sqrt{x}$.

a Complete the table for $f(x)$:

b Sketch a graph of the function $f(x)$.

x	0	1	4	9	16
$f(x)$					
$g(x)$					

c Complete the table of values for the transformed function $g(x) = f(4x)$, giving all values in exact form.

d Sketch a graph of $g(x)$.

e Describe how $g(x)$ relates to the graph of $f(x)$.

f Explain why the transformed function $h(x) = f(-4x)$ can be undefined for the values of x in the table.

30 The table below shows values that satisfy the function $f(x) = |x|$:

x	-3	-2	-1	0	1	2	3
$y = f(x)$	3	2	1	0	1	2	3

a Complete the table of values for each transformation of the function $f(x)$:

x	-3	-2	-1	0	1	2	3
$y = f(x)$	3	2	1	0	1	2	3
$g(x) = 5f(x)$							
$h(x) = -2f(x)$							

b Sketch the graphs of $f(x)$ and $g(x)$ on the same coordinate plane.

c Describe the transformation undergone by $f(x)$ to become $g(x)$.

d Sketch the graphs of $f(x)$ and $h(x)$ on the same coordinate plane.

e Describe the transformation undergone by $f(x)$ to become $h(x)$.
