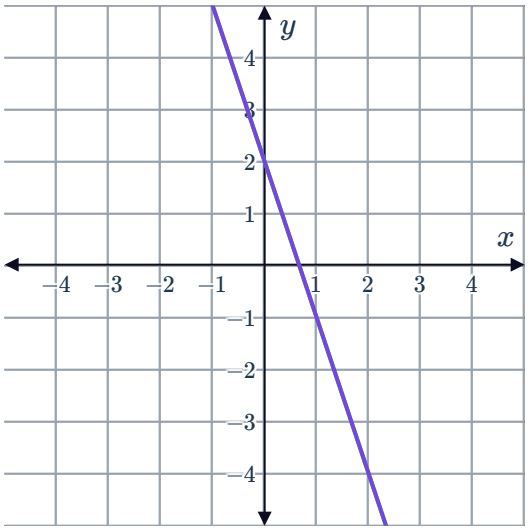

Graphing systems of equations

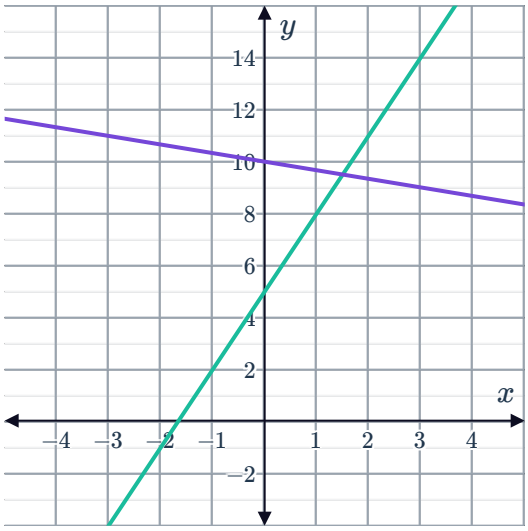

1 State whether the following graphs show a system of equations with:

- No solutions
- One solution
- Infinitely many solutions

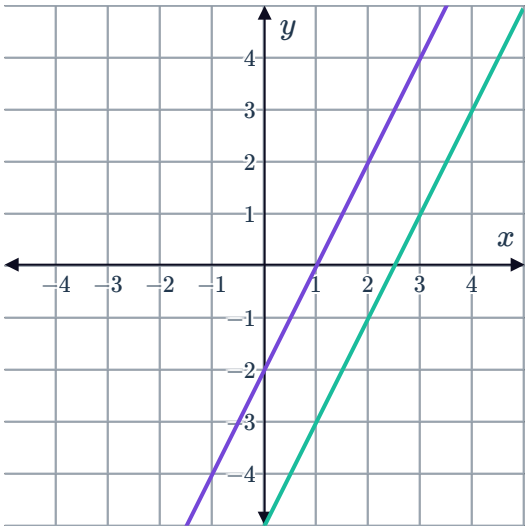

a

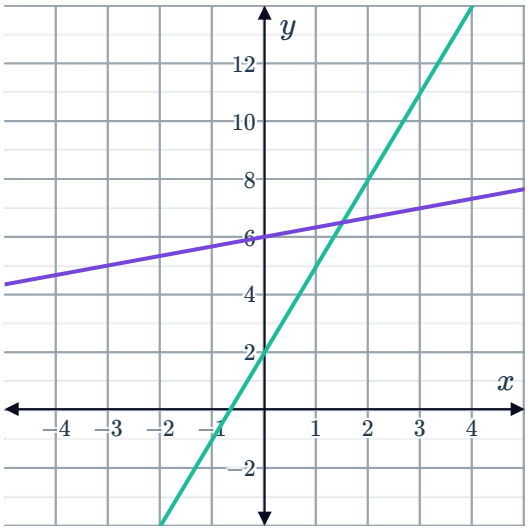

b

c

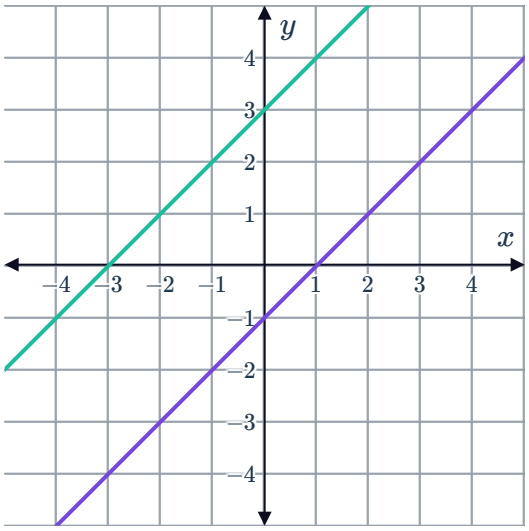

d

e

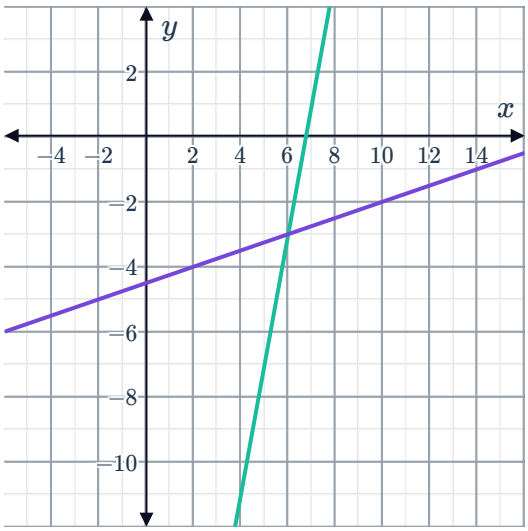

2 State the solution to the following systems of equations in the form (x, y).

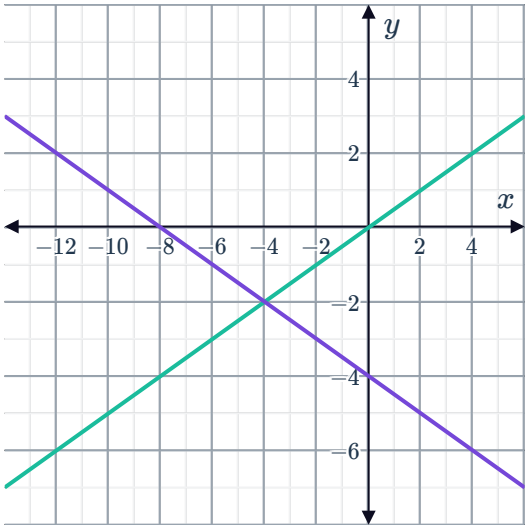

a

b

c

6 Consider the following systems of linear equations:

i Sketch the graph of both lines on the same coordinate axes.

ii State if there exists a value for x and y that satisfy the two equations simultaneously. If yes, state the values of x and y.

a $y = -4x - 1$
$y = -4x + 2$

b $4x - 2y = 2$
$-2x + 4y = 2$

c $y = 5x - 7$
$y = -x + 5$

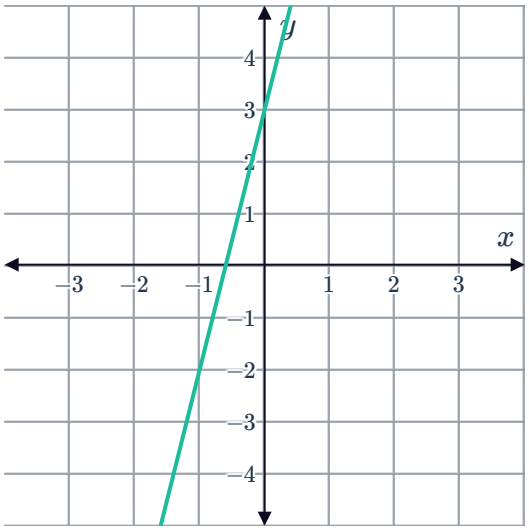

d $y = x + 0$
$y = -1$

7 A system of linear equations has no solutions. One of the equations of the system is $y = -4x - 3$. Which equation could be the other equation of the system?

- $y = -4x - 4$
- $y = -\frac{x}{4} - 3$
- $y = 4x + 3$
- $y = \frac{x}{4} - 4$

8 Consider the graph of the equation $y = 5x + 3$:
If a second line $y = mx + b$ intersects this line at the point $(0, 3)$, which of the following statements is true?

- $b = 3$
- $m > 5$
- $m = 5$
- $m < 0$

9 Consider the system of linear equations:

- Equation 1: $y = x - 2$
- Equation 2: $y = 5x - 6$

a Add equations 1 and 2 to create equation 3. State equation 3.

b Sketch the graph of equations 1, 2 and 3 on the same coordinate axes.

c Determine the solution to the system of equations.

10 Consider the system of linear equations:

- Equation 1: $2x + y = -2$
- Equation 2: $2x + 5y = 14$

a Multiply Equation 1 by 3 and add it to Equation 2 to create Equation 3. State Equation 3.

b Sketch the graph of equations 1, 2 and 3 on the same coordinate axes.

c Determine the solution to the system of equations.

11 A rectangular zone is to be 4 ft longer than it is wide, with a total perimeter of 32 ft. Let y represent the length of the rectangle and x represent the width.

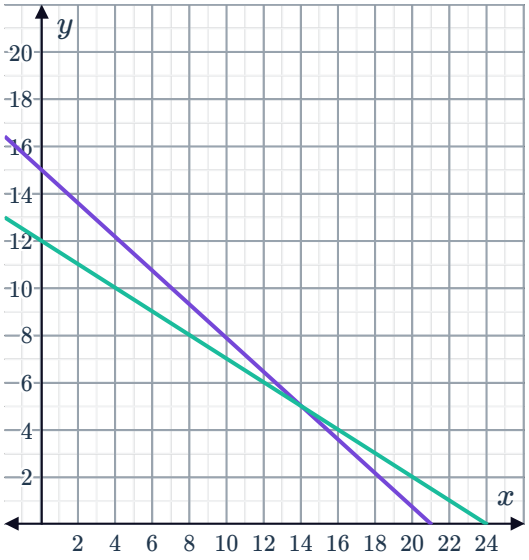

a Write the two equations that represent the information.

b Sketch the graph of the two equations on the same axes.

c Hence, find the values of the length and width of the rectangle.

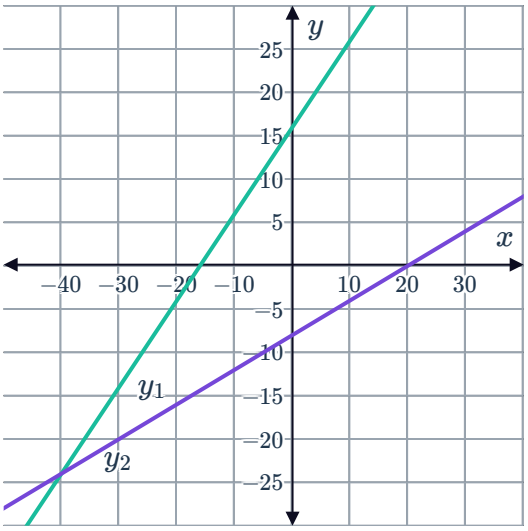

Additional questions

12 Write a scenario to represent the system of equations and its solution. Explain what the solution to the system means in terms of the scenario.

13 Two equations, y_1 and y_2 represent the growth of two different house plants over time. Use the graph of y_1 and y_2 to support the claim that the two plants will never reach the same height on the same day.

14 Describe a situation where it would be unfeasible to solve a system of equations by graphing.
