13 Christa performs an experiment where she pours 80 millilitres of honey, 82 millilitres of vegetable oil, and 200 millilitres of water into a tall glass. What is the total volume of liquid she has poured into the glass?

14 Mae, Luke and Han put their money together for a gift for their father on Father's Day. The gift cost them $\$60$ all together. Mae contributed $\$20$ and Luke contributed $\$25$. How much was Han's contribution to the gift?

15 On Meteor Island a species of hawk sustains itself by eating the local rabbits. In the first survey of animals on the island, there were found to be 7 rabbits for every hawk. The rabbit population has grown to 840 individuals according to the last survey, and there are still 7 rabbits for every hawk.
How many hawks does this island now support?

16 A cargo ship transporting crates of fruit encounters a storm on the high seas and is delayed by two weeks. Once it arrives the crew discovers that 3 out of the 96 crates of fruit have spoilt.
If each crate contained 36 kg of fruit and each kilogram of fruit can be sold for $\$4$, what is the value of the remaining cargo?

17 A factory makes around 5000 mobile phone batteries every month, and the defects are removed by a quality control expert. There were 15 defects in January, 16 in February, and 23 in March.

- **a** How many defects were there in January, February, and March combined?
- **b** The next three months produced the same total number of defects as the first three months. However, each of April, May, and June produced the same number of defects. How many defects were there in April?

18 Buzz wanted to share some sweets between his football teammates. He brought 60 sweets expecting all 10 of his teammates to be at practice, but two did not come. He splits the sweets equally among his teammates who came and keeps the remainder for himself.
How many sweets are left over?

19 Sarah is playing a number game. She starts with any number, and if it is even she divides the number by 2. If it is odd she triples the number and adds 1. This gives her a new number, and she repeats the same steps on this new number. She keeps going until her number is 1.
An example of a list of numbers she makes is shown below.

Starting number	List
5	$5, 16, 8, 4, 2, 1$

Write the complete list she would create if she started with the number 3.
