Trigonometry in 3D

1 All edges of the following cube are $7\ \text{cm}$ long:

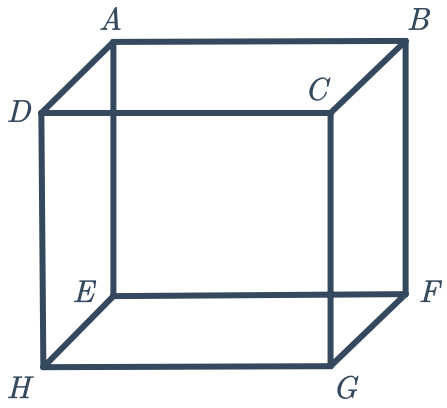

a Find the exact length of the following:

i EG ii AG

b Find the following angles to the nearest degree:

i $\angle EGH$ ii $\angle EGA$

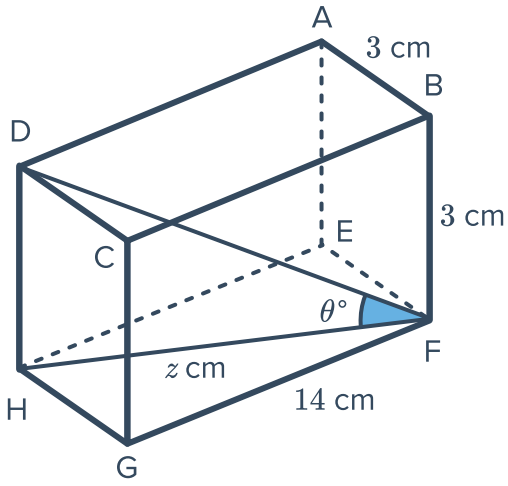

iii $\angle AHG$ iv $\angle AGH$

2 A square prism has sides of length $3\ \text{cm}$, $3\ \text{cm}$ and $14\ \text{cm}$ as shown in the diagram:

a If the diagonal HF has a length of $z\ \text{cm}$, find the value of z to two decimal places.

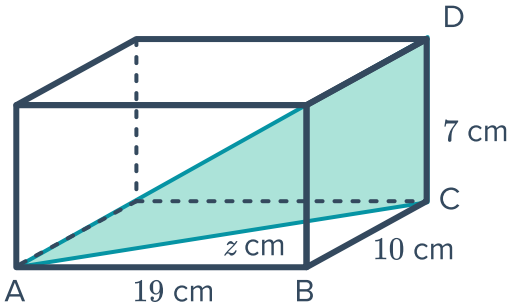

b If the size of $\angle DFH$ is θ°, find θ to two decimal places.

3 The box have a triangular divider placed inside it, as shown in the diagram:

a If $z = AC$, find the value of z to two decimal places.

b Find the area of the divider correct to two decimal places.

4 A triangular prism has dimensions as shown in the diagram:

a Find the size of $\angle AED$, correct to two decimal places.

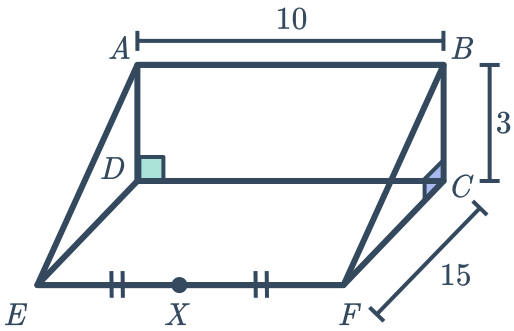

b Find the exact length of CE.

c Find the exact length of BE.

d Find the size of $\angle BEC$, correct to two decimal places.

e Find the exact length of CX.

f Find the size of $\angle BXC$, correct to two decimal places.

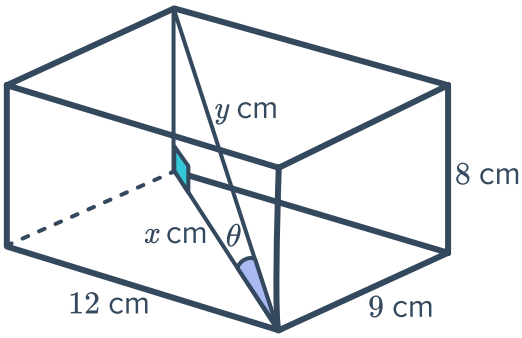

5 Consider the given rectangular prism:

a Find the length x.

b Hence, find the length of the prism's diagonal y.

c Find the angle θ to the nearest degree.

6 Consider the cube as shown:

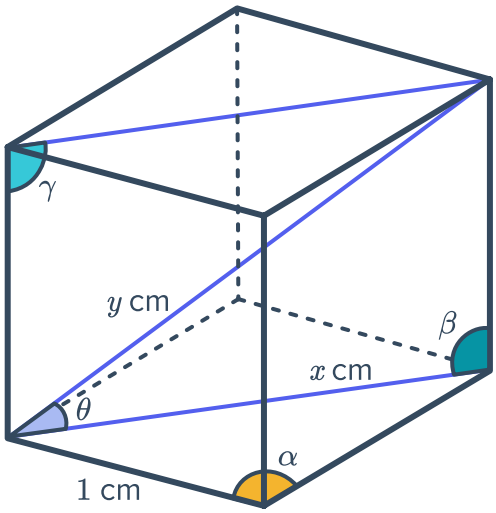

a Find the size of:

i α ii β iii γ

b Calculate the exact length of x.

c Calculate the exact length of y.

d Hence, find the angle θ to the nearest degree.

7 A $25\text{ cm} \times 11\text{ cm} \times 8\text{ cm}$ cardboard box contains an insert (the shaded area) made of foam:

a Find the exact length b of the base of the foam insert.

b Find the area of foam in the insert, rounded to the nearest square centimetre.

c Find the value of θ to the nearest degree.

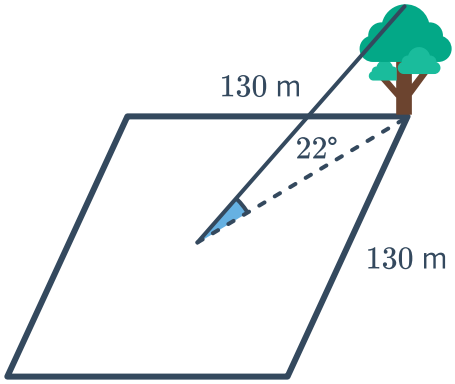

8 A tree stands at the corner of a square playing field. Each side of the square is 130 m long. At the centre of the field the tree subtends an angle of 22° as shown:

a Find the distance from the tree to the centre of the field. Round your answer to two decimal places.

b Find the height of the tree. Round your answer to two decimal places.

c Find the size of the angle subtended by the tree at the corner of the field opposite the tree. Round your answer to the nearest minute.

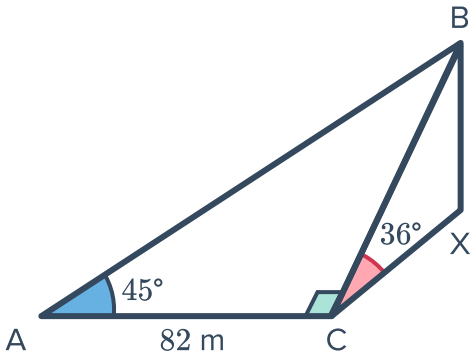

d Find the size of the angle subtended by the tree at an adjacent corner of the field. Round your answer to the nearest minute.

9 A, C, and X are three points in a horizontal plane and B is a point vertically above X as shown in the diagram:

Find the following lengths to the nearest metre:

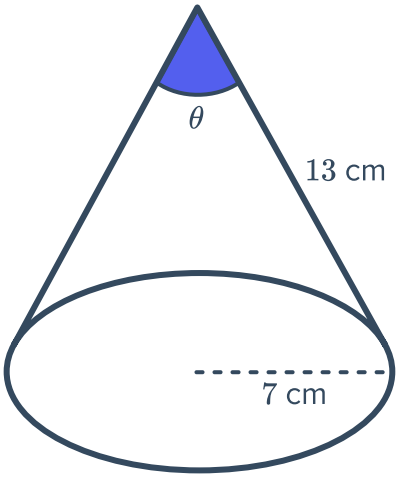

a BC **b** XB

10 A cone has radius $7\ \text{cm}$ and a slant height of $13\ \text{cm}$:

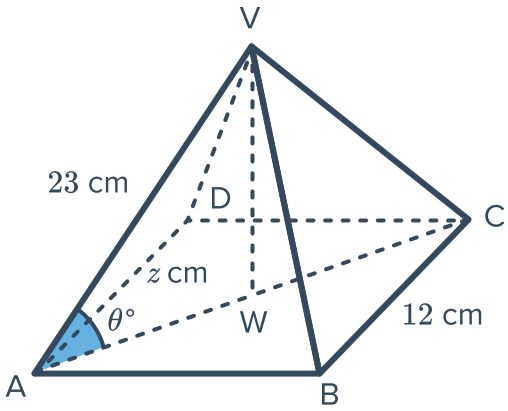

Find the vertical angle, θ, at the top of the cone in degrees and minutes.

11 The following is a right pyramid on a square base with side length $12\ \text{cm}$. The edge length VA is $23\ \text{cm}$.

a If $z = AW$, calculate the length z.

b If $\theta = \angle VAW$, find the value of θ.

12 The following pyramid has a square base with side length $8\ \text{cm}$, and all slanted edges are $12\ \text{cm}$ in length:

a Find the exact length of MD.

b Find the size of $\angle PDM$, correct to two decimal places.

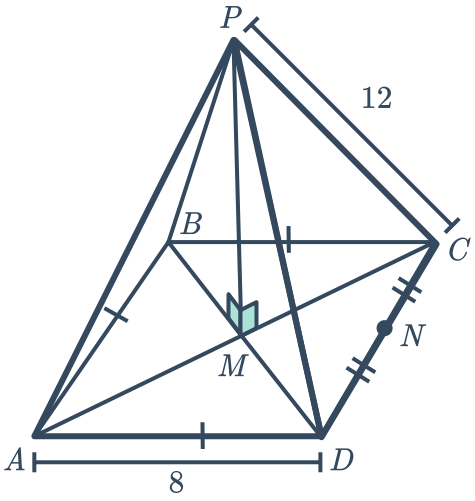

c Find the exact height of the pyramid, MP.

d Find the length of MN.

e Find the exact length of PN.

f Find the size of $\angle PNM$, correct to two decimal places.

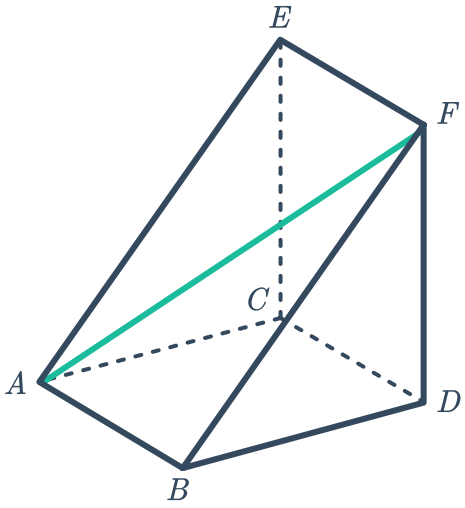

g Find the size of $\angle PDC$, correct to two decimal places.

13 This triangular prism shaped box needs a diagonal support inserted as between A and F as shown:

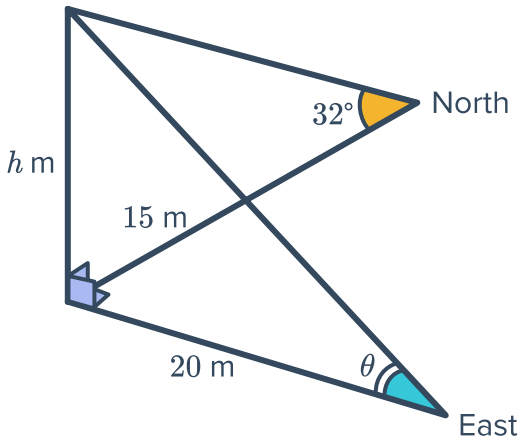

$AB = 19$, $BD = 30$ and $DF = 43$. find the length of AF to two decimal places.

14 From a point 15 m due north of a tower, the angle of elevation of the tower is 32°.

a Find the height of the tower h. Round your answer to two decimals places.

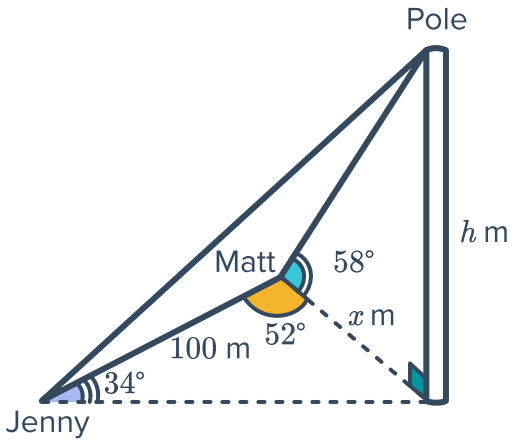

b Find the size θ of the angle of elevation of the tower at a point 20 m due east of the tower. Round your answer to the nearest degree.

15 A pole is seen by two people, Jenny and Matt:

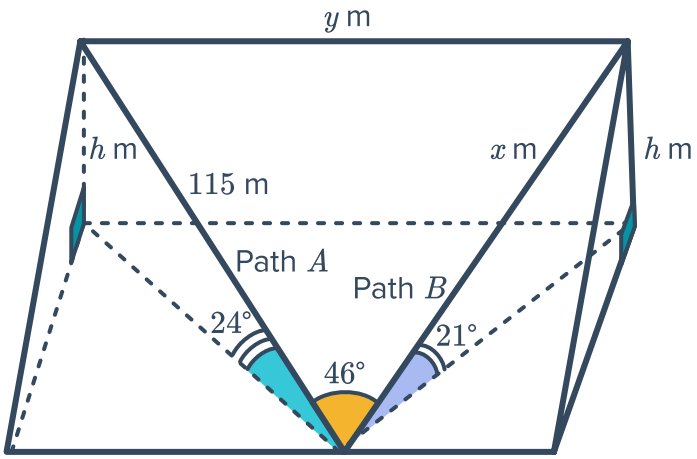

a Matt is x m from the foot of the pole. Find x to the nearest metre.

b Find the height of the pole h to the nearest metre.

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

16 Two straight paths to the top of a cliff are inclined at angles of 24° and 21° to the horizontal:

a If path A is 115 m long, find the height h of the cliff, rounded to the nearest metre.

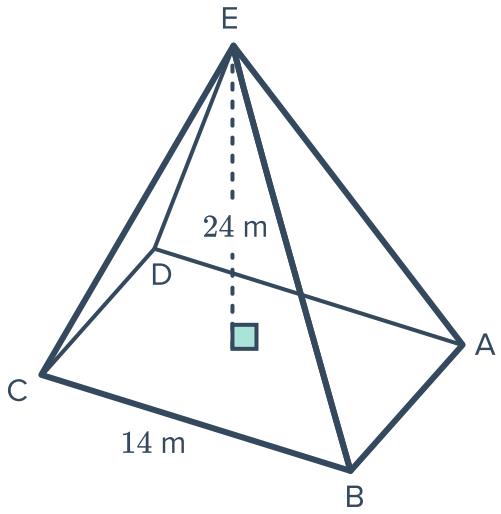

b Find the length x of path B, correct to the nearest metre.

c Let the paths meet at 46° at the base of the cliff. Find their distance apart, y, at the top of the cliff, to the nearest metre.

17 A pyramid has a square base with side length 14 m and a vertical height of 24 m:

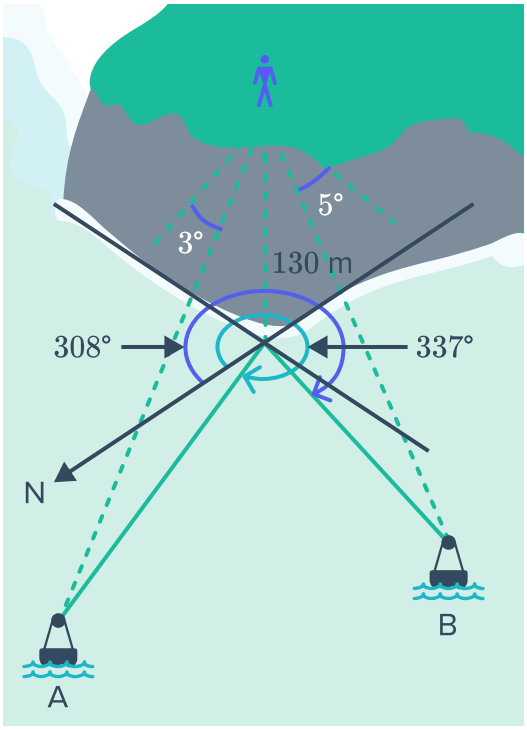

a Find the length of the edge AE. Round your answer to one decimal place.

b Find the size of $\angle BEA$, to the nearest minute.

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

18 Two buoys, A and B, are observed from a lookout at the top of a 130 m high cliff. The bearing of buoy A is 337° and its angle of depression is 3°. The bearing of buoy B is 308° and its angle of depression is 5°:

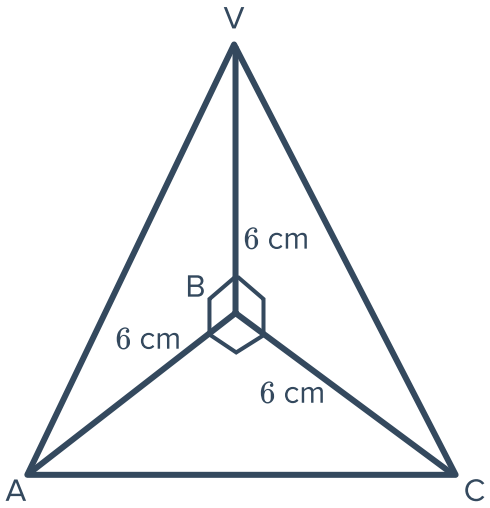

a Find the distance, to the nearest metre, from buoy A to the base of the cliff.

b Find the distance from buoy B to the base of the cliff, to the nearest metre.

c Find the distance between the two buoys, to the nearest metre.

19 In the tetrahedron shown, the angles $\angle VBC$, $\angle VBA$, and $\angle ABC$ are all right-angles.

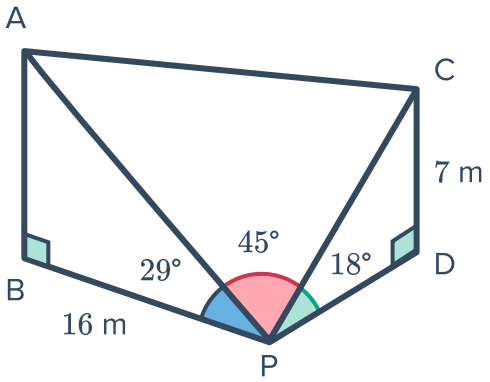

a Find the following distances, to two decimal places:

i VA ii VC iii AC

b Find the size of angle $\angle VCA$. Round your answer to the nearest minute.

20 Roald is standing at point P and observes two poles, AB and CD, of different heights. P, B, and D are on horizontal ground:

From P, the angles of elevation to the top of the poles at A and C are 29° and 18° respectively. Roald is 16 m from the base of pole AB. The height of pole CD is 7 m.

a Calculate the distance from Roald to the top of pole CD, to two decimal places.

b Calculate the distance from Roald to the top of pole AB, to two decimal places.

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

c Calculate the distance between the tops of the poles, to two decimal places.

21 Point A is due north of a tower, and has an angle of elevation to the top of the tower of 51°. Point B is $100\ \text{m}$ from point A on a bearing of 120°. The angle of elevation from point B to the top of the tower is 25°.

Find the height of the tower to the nearest metre.

22 A room measures $5\ \text{m}$ in length and $4\ \text{m}$ in width. The angle of elevation from the bottom left corner to the top right corner of the room is 57°.

a Find the exact distance from one corner of the floor to the opposite corner of the floor.

b Find the height of the room. Round your answer to two decimal places.

c Find the angle of elevation from the bottom corner of the $5\ \text{m}$ long wall to the opposite top corner of the wall. Round your answer to two decimal places.

d Find the angle of depression from the top corner of the $4\ \text{m}$ long wall to the opposite bottom corner of the wall. Round your answer to two decimal places.

23 A and B are two positions on level ground. From an advertising balloon at a vertical height of $740\ \text{m}$, A is observed in an easterly direction and B at a bearing of 159°. The angles of depression of A and B, as viewed from the balloon, are 30° and 20°, respectively.

a Find the distance from point A to the point directly below the advertising balloon, to the nearest metre.

b Find the distance from point B to the point directly below the advertising balloon, to the nearest metre.

c Find the distance between points A and B, to the nearest metre.
