

Numbers, Percents & Ratios

Properties of integers and number classification

- 1 Classify the number $-\frac{7}{2}$ as an integer, rational number, or irrational number.
 - 2 Find the greatest common factor (GCF) and least common multiple (LCM) of 18 and 24.
-

Divisibility and prime factorization

- 3 Find the prime factorization of 360.
 - 4 Determine whether 91 is prime, and justify your answer.
-

Percent increase and decrease

- 5 A price increases from 80 dollars to 92 dollars. Find the percent increase.
 - 6 A population of 5000 decreases by 8%. Find the new population.
-

Percent of a percent (successive percent changes)

- 7 A jacket is marked down 30%, then an additional 10% is taken off the sale price. If the original price was 100 dollars, find the final price.
-

Ratios and proportional reasoning

- 8 The ratio of boys to girls in a class is 3:5. If there are 40 students total, find the number of boys.
 - 9 A recipe uses a ratio of 2 cups flour to 3 cups sugar. If a baker uses 15 cups of sugar, how much flour is needed?
-

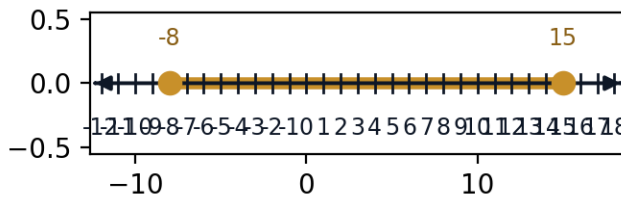

Scientific notation

- 10 Write 0.000452 in scientific notation.

- 11 Evaluate $(3 \times 10^4) \times (2 \times 10^{-2})$, giving your answer in scientific notation.
-

Absolute value and number line reasoning

- 12 Find all values of x satisfying $|x - 4| = 9$.
- 13 Find the distance between -8 and 15 on the number line, using absolute value.

Word problems involving rates and mixtures

- 14 A store mixes 4 pounds of candy costing 3 dollars per pound with 6 pounds of candy costing 5 dollars per pound. Find the average price per pound of the mixture.
- 15 A factory's production increased from 240 units per day to 300 units per day. Express this change as a ratio in simplest form.
-

Combining percent, ratio, and rate concepts

- 16 This question has two parts. A store buys a product for 40 dollars and marks it up 60% to set the retail price. (a) Find the retail price. (b) If the store later offers a 25% discount off the retail price, find the discounted price, and determine whether the store still makes a profit compared to its 40-dollar cost.
-

Order of operations and simplifying numerical expressions

- 17 Evaluate $6 + 2(9 - 3)^2 \div 4$.
- 18 Evaluate $\frac{5^2 - 3^2}{2^3 - 2}$.
-

Fractions, decimals, and conversions

- 19 Convert $\frac{7}{8}$ to a decimal and to a percent.

- 20 Add $\frac{2}{3} + \frac{3}{4}$, giving your answer as a simplified fraction.
-

Sequences: arithmetic and geometric

- 21 Find the 10th term of the arithmetic sequence 4, 9, 14, 19, ...
- 22 Find the 6th term of the geometric sequence 3, 6, 12, 24, ...
-

A multi-step number theory and ratio problem

- 23 This question has two parts. A recipe for 12 cookies requires a ratio of 3 cups flour to 2 cups sugar to 1 cup butter. (a) Find the amount of each ingredient needed to make 30 cookies. (b) If flour costs 0.60 dollars per cup, sugar costs 0.80 dollars per cup, and butter costs 1.50 dollars per cup, find the total ingredient cost for 30 cookies.
