

Review: Identifying similar triangles

1 Consider the following sets of four triangles:

i Determine the similar triangles.

ii Give a suitable reason for their similarity.

a

A

B

C

D

b

A

B

C

D

2 Which of the following triangles are similar?

A

B

C

3 Consider the following triangles.
What is the minimum amount of extra
information we would need to establish that
these are similar triangles.

4 Consider the following triangles.

Determine whether the following information, if added to the diagram, could be used to prove immediately that the triangles are similar.

a $\angle ABC \cong \angle DEF$

b $\angle BAC \cong \angle EDF$

c $\overline{BC} \cong \overline{EF}$

d $\angle ACB \cong \angle DFE$

5 For each of the given pairs of triangles, determine whether there are enough information to show whether or not the triangles are similar.

a

b

- 6 Determine whether the following pairs of triangles are similar or not. Give the reason for your answer.

a

b

c

d

h

7 Is it true that all equilateral triangles are similar? Justify your reasoning.

Additional questions

8 For each of the following sets of triangles:

- Identify which two are similar.
- Identify the similarity test that the pair satisfy: AA, SSS, SAS, or HL.

a

A

B

- 9 For the following diagrams, identify the two similar triangles and state the similarity test that they satisfy.

a

b

- 10 Consider the following diagram:
State the similarity test that triangles $\triangle ABX$ and $\triangle CDX$ satisfy.

- 11 Consider the following diagram, where $\overline{AD}$ is a straight line:
What information is required to know that triangles $\triangle ABC$ and $\triangle DBE$ are in fact similar?

- 12 Consider the following diagram, where $\overline{EH}$ and $\overline{FG}$ are straight lines:
What information is required to know that triangles $\triangle EFX$ and $\triangle GHX$ are in fact similar?

- 13 Consider the following diagram, where $\overline{TZ}$ and $\overline{UY}$ are non-parallel straight lines:
- Explain why the triangles $\triangle TUX$ and $\triangle YZX$ are not similar.
 - What length does YZ need to be for the two triangles to be similar?
