Optimisation

1

a

i $(-1, 96)$ ii 96 iii -120

b

i No stationary points in the given domain.

ii 88

iii -12

c

i $(-2, -128)$ ii 72 iii -128

d

i No stationary points in the given domain.

ii 28

iii -80

e

i $\left(\frac{26}{3}, -\frac{319}{27}\right), (4, 39)$ ii 339

iii $-\frac{319}{27}$

2

a $(1, -2)$ **b** -2

3

a Absolute minimum, because the parabola is concave up as seen by the positive coefficient of x^2.

b $y = 2$

4

a Absolute maximum, because the parabola is concave down as seen by the negative coefficient of x^2.

b $y = \frac{1}{2}$
