a $27.7\ \text{kg}$

b The y-intercept indicates that when a child is $0\ \text{cm}$, their average weight is $27.7\ \text{kg}$.

c No, a child cannot have a height of $0\ \text{cm}$.

16

a The vertical intercept indicates that when a family has no income, its average spending on dining out is $\$27$.

b No, it does not make sense because the family could not spend $\$27$ dining out each week with an income of $\$0$.

c 0.3

d $\$60$

17

a The vertical intercept indicates that when a student watched no TV, the mark in the exam, on average, was 97%.

b Yes, it is reasonable that a student who spends no time watching TV could get an exam mark of 97%.

c -10

d 35%

18

a 0.09 years per $\$1000$

b 72.55 years
