Right-angled triangles

1 For the following triangles, name the hypotenuse:

a

b

2 Consider the following triangle:

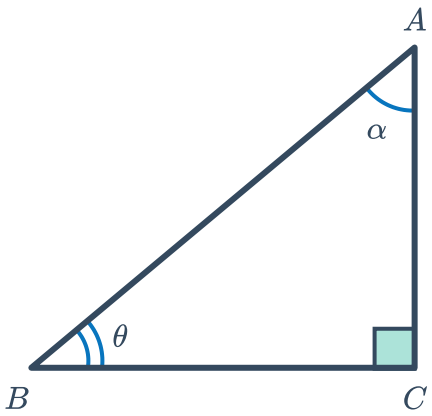

a State the opposite side to angle θ.

b State the adjacent side to angle θ.

c State the opposite side to angle α.

d State the adjacent side to angle α.

e State the angle that is opposite the hypotenuse.

3 With reference the angle θ, find the value of these ratios for each of the following triangles:

i $\dfrac{\text{Opposite}}{\text{Adjacent}}$ ii $\dfrac{\text{Opposite}}{\text{Hypotenuse}}$ iii $\dfrac{\text{Adjacent}}{\text{Hypotenuse}}$

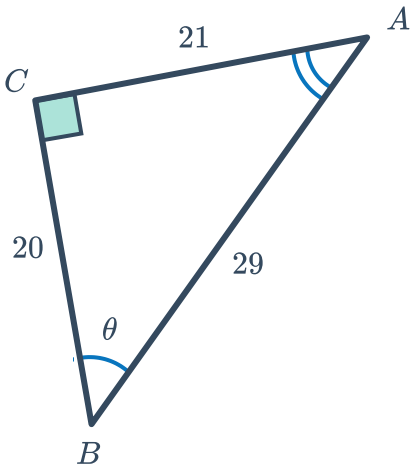

a

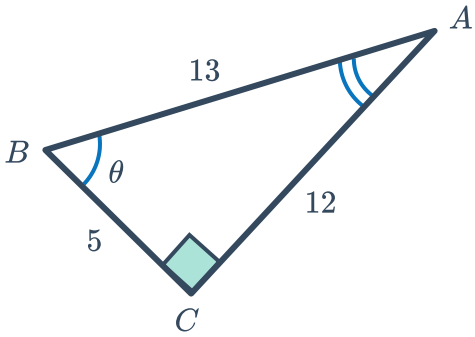

b

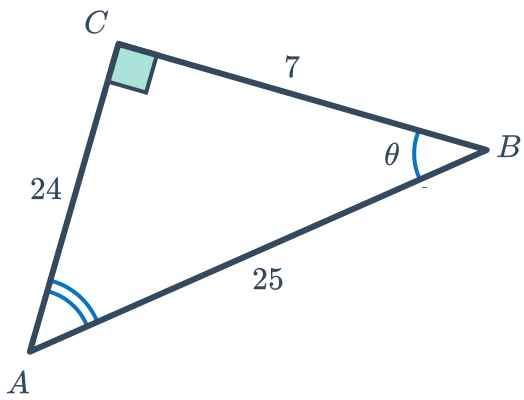

c

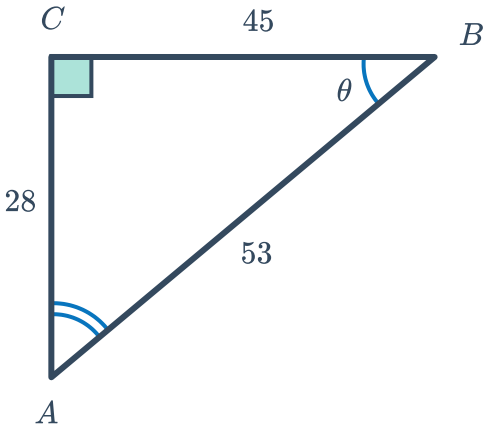

d

e

f

Trigonometric ratios

4 Write down the indicated ratios for the following triangles:

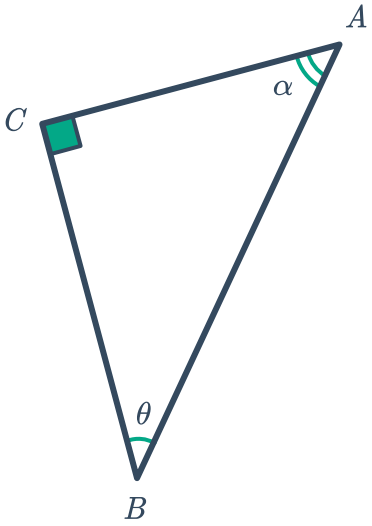

a

i $\tan\theta$ ii $\sin\alpha$

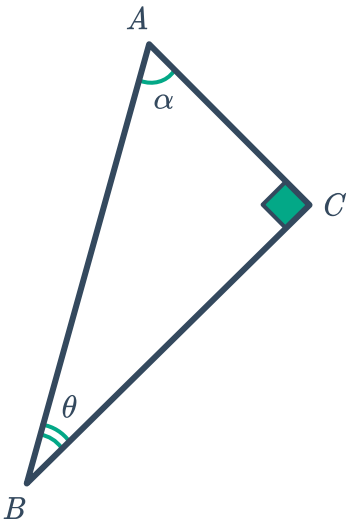

b

i $\sin\theta$ ii $\tan\alpha$

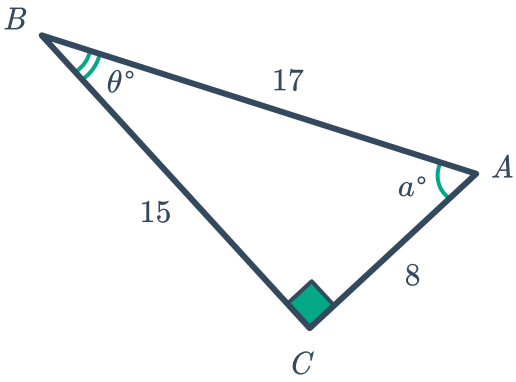

c

i $\cos\theta$ ii $\cos\alpha$

d

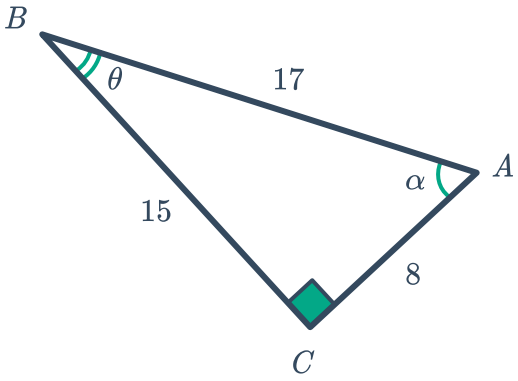

i $\tan\theta$ ii $\sin\alpha$

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

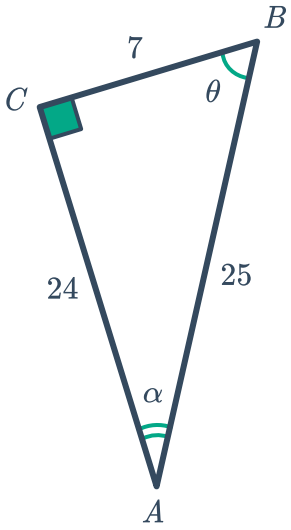

e

i $\cos\theta$ ii $\tan\alpha$

f

i $\sin\theta$ ii $\cos\alpha$

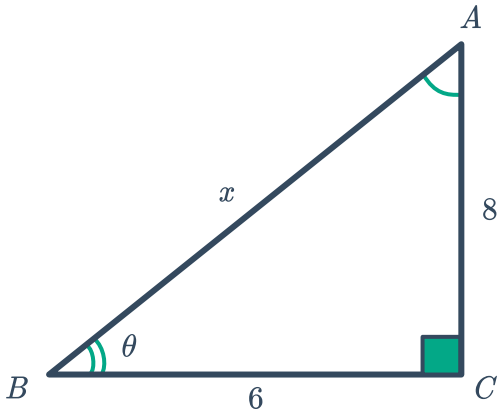

5 Consider the following triangle:

a Find the value of x.

b Find the value of $\sin\theta$.

c Find the value of $\cos\theta$.

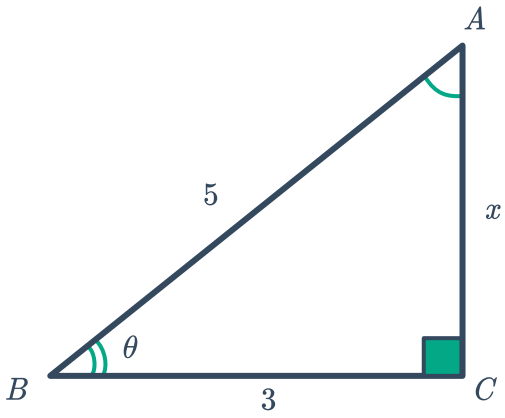

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

6 Consider the following triangle:

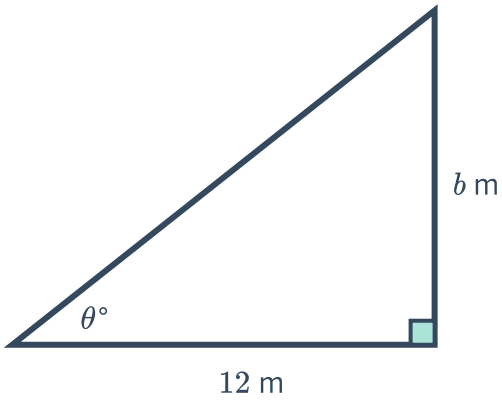

a Find the value of x.

b Hence, find the value of $\tan\theta$.

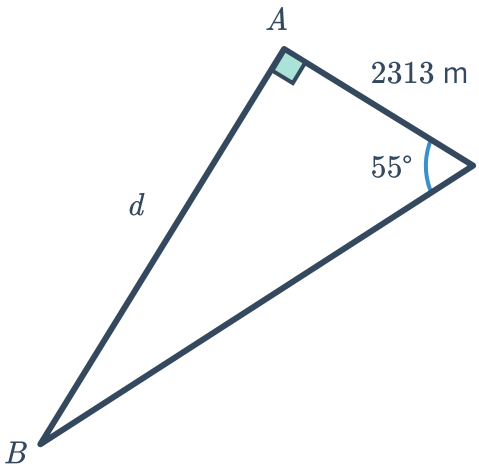

Unknown sides

7 For the following triangle, if $\tan\theta = \frac{2}{3}$, find the value of b.

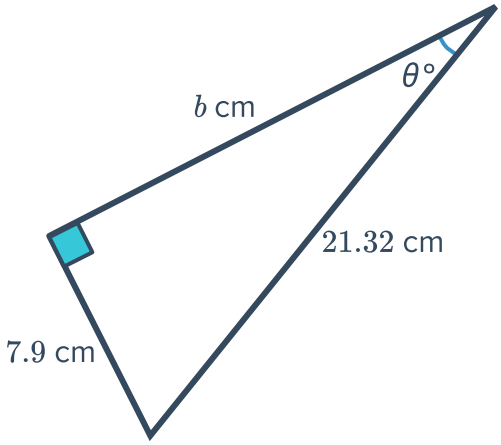

8 For the following triangle, if $\tan\theta = \frac{4}{3}$, find the value of d.

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

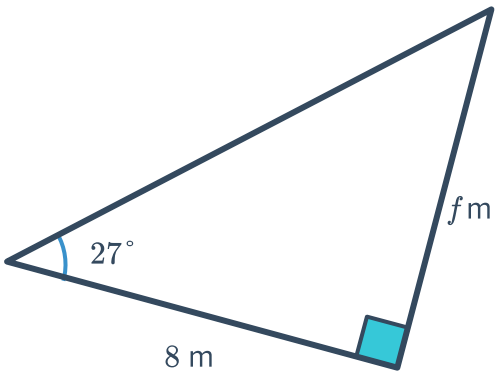

9 For the following triangle, if $\tan\theta = 0.4$, find the value of b.

Round your answer correct to one decimal place.

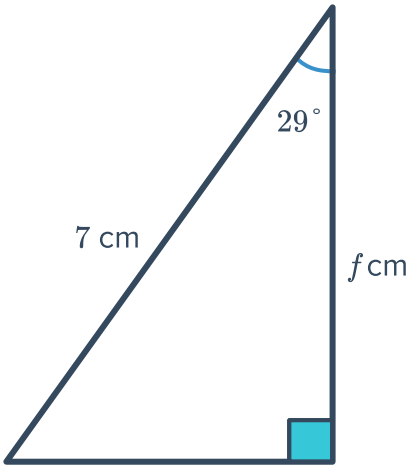

10 Find the value of the pronumeral in the following triangles, correct to two decimal places:

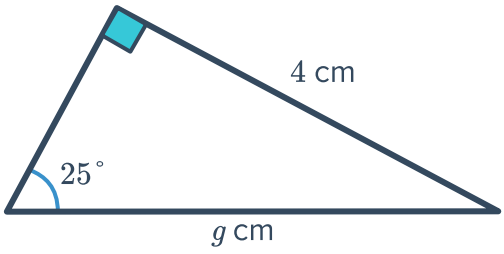

a

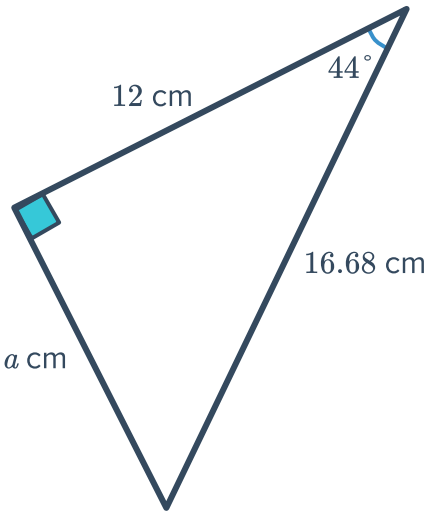

b

c

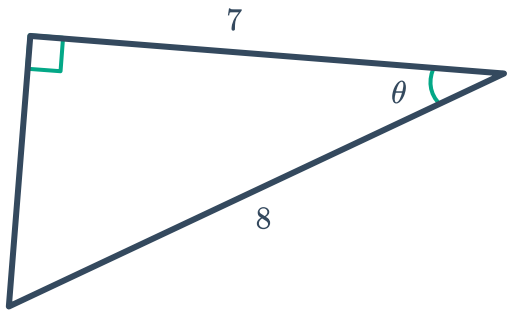

d

Unknown angles

11 Given the following triangle, calculate the exact value of $\tan\theta$.

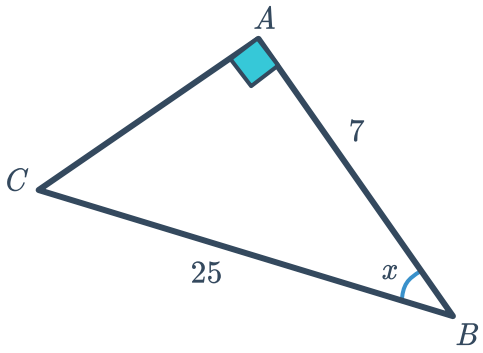

12 For each of the following triangles, find the value of x to the nearest degree:

a

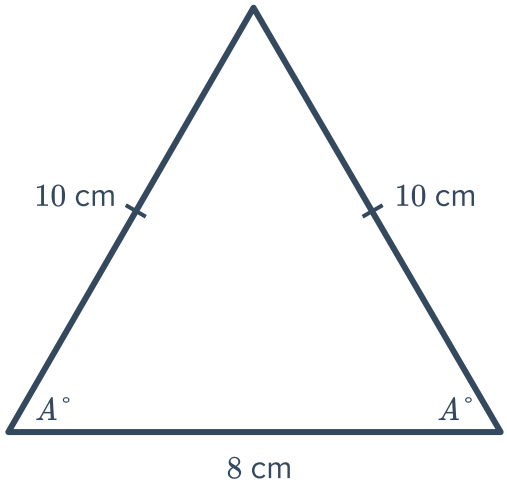

b

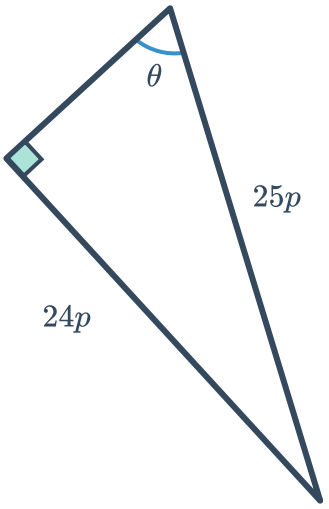

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

13 An isosceles triangle has equal side lengths of $10\ \text{cm}$ and a base of $8\ \text{cm}$ as shown.

Calculate the size of angle A to one decimal place.

14 Find the value of $\tan\theta$ for the following triangle:

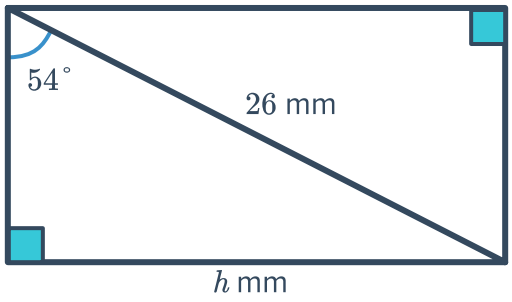

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

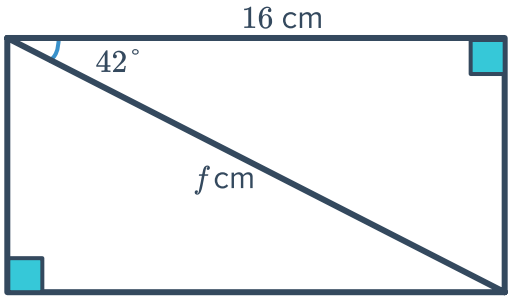

Applications

15 Find the value of the pronumeral(s) in the following diagrams, correct to the nearest whole number:

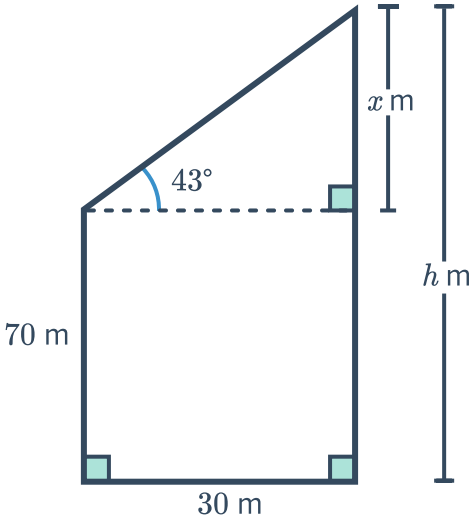

a

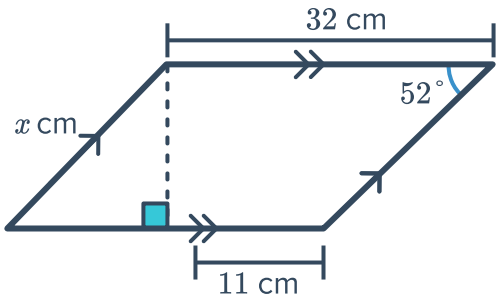

b

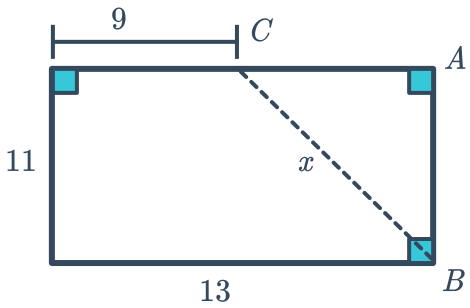

c

d

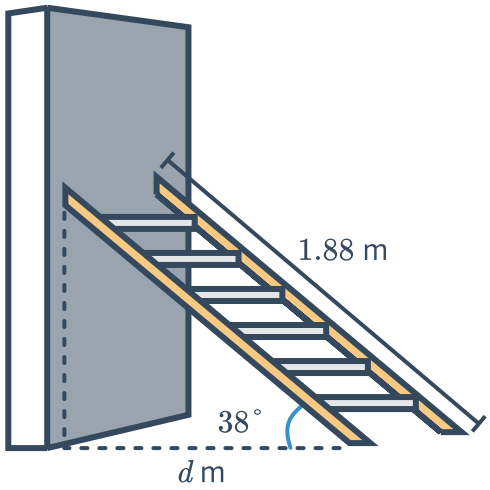

e

16 If d is the distance between the base of the wall and the base of the ladder, find the value of d to two decimal places.

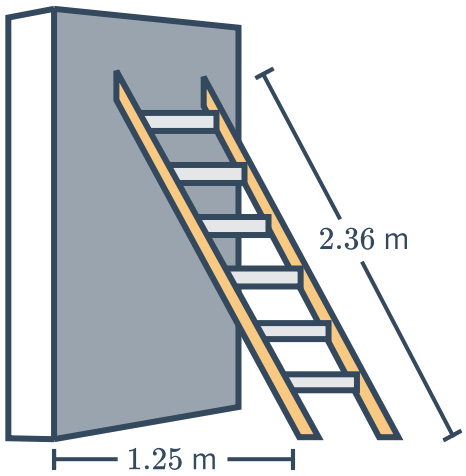

17 A ladder is leaning at an angle of 44° against a $1.36\ \text{m}$ high wall. Find the length of the ladder, to two decimal places.

18 A ladder measuring $2.36\ \text{m}$ in length is leaning against a wall.

If the angle the ladder makes with the ground is y°, find the value of y to two decimal places.

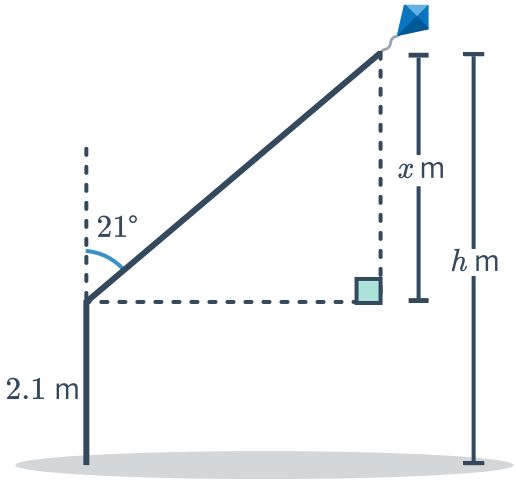

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

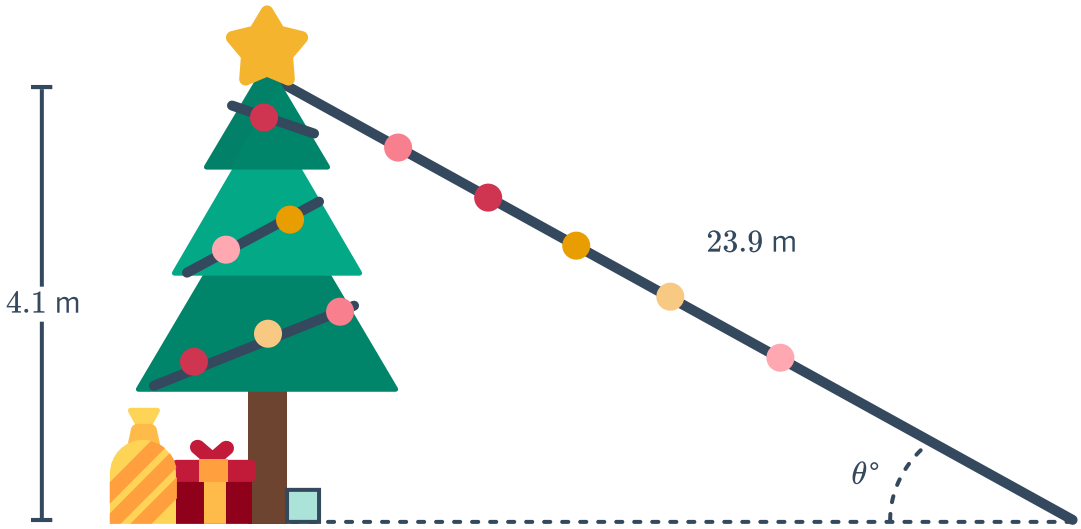

19 A girl is flying a kite that is attached to the end of a $23.4\ \text{m}$ length of string. The angle between the string and the vertical is 21°. The girl is holding the string $2.1\ \text{m}$ above the ground.

a Find x, correct to two decimal places.

b Hence, find the height, h, of the kite above the ground, correct to two decimal places.

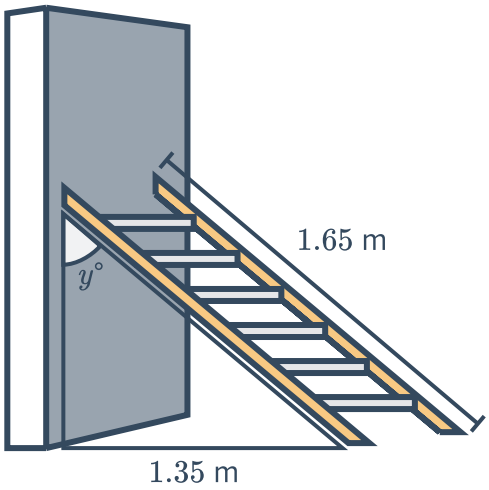

20 In the diagram, a string of lights joins the top of the tree to a point on the ground $23.9\ \text{m}$ away. If the angle that the string of lights makes with the ground is θ°, find θ to two decimal places.

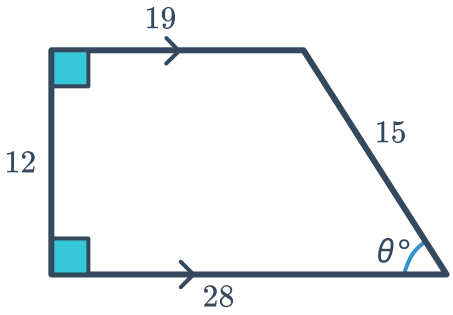

© ClipSAT: By Mr. Mohamed Abdallah +966597688647

21 A ladder measuring $1.65\ \text{m}$ in length is leaning against a wall. If the angle the ladder makes with the wall is y°, find y to two decimal places.

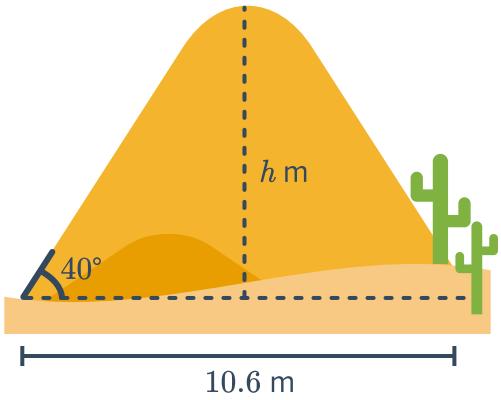

22 Find the value of $\tan\theta$ in the following trapezium:

23 A sand pile has an angle of 40° and is $10.6\ \text{m}$ wide.

Find the height of the sand pile, h, to one decimal place.
