

Literal equations and formulas

1

a $x = y - z$

c $x = -\frac{y}{8} - 7$

e $x = -45 - \frac{9n}{5}$

b $x = 4y$

d $x = 45 - \frac{9n}{2}$

f $x = \frac{m}{k - n}$

2

a $m = ghy$

c $m = -\frac{x}{2k} - n$

b $m = \frac{y + 5}{9x}$

d $m = \frac{x}{3k} - n$

3

a $k = \frac{3r}{r - 1}$

b $k = \frac{7(m + 3)}{5x}$

4

$$y = \frac{x}{h - k}$$

5

a $R = \frac{V + E}{I}$

b $R = \frac{D}{T}$

6 Possible answers:

- Subtract 32 from both sides, then multiply by 5 and divide by 9. This results in $C = \frac{5(F - 32)}{9}$.
- Multiply all the terms by 5, then subtract 160 from both sides. The last step is to divide by 9. This results in $C = \frac{5F - 160}{9}$.

7

$$T = \frac{360B}{\pi A} - 2R$$

8

$$v_0 = \frac{S - \frac{1}{2}at^2}{t} \text{ or } v_0 = \frac{S}{t} - \frac{1}{2}at$$

9

$$v_f = at + v_i$$

10 20°C

11

a 57.6 gigabits

b 28.8 gigabits/hour

12 $h = 12$

13 $h = 9$

14 $h = 10$

15 $I = 0.25$

16 $a = -10$

17 $b = 21.60$

18 $R = 2C$

19 160 cm^3

20 $280\pi \text{ cm}^2$

21

a $x = \frac{y - 73}{0.28}$

b $x = 78.571$

c 2049

22

a $x = \frac{y - 1.37}{0.106}$

b $x = 20.094$

c 2021

Additional questions

23 We can have multiple equations solving for various unknowns. Once these equations have been rewritten, we do not have to do this manipulation again.

25 $l = \frac{P - 2w}{2}$

26 $C = \frac{5(F - 32)}{9}$

27

a $r = \frac{d}{t}$

b 20 mi/h

28 Both equations can be rearranged for x . When $3x + 8 = 2$ is rearranged for x the answer is numerical. Whereas when $3x + y = z$ is rearranged for x the answer has unknowns, y and z , in it. However if you substitute $y = 8$ and $z = 2$, you get the same numerical answer as solving $3x + 8 = 2$.

29 Rufino has an error in his working.

$KE = \frac{1}{2}mv^2$ The equation for KE as given

$2KE = mv^2$ Multiplying both sides by 2

$\frac{2KE}{v^2} = m$ Now he should have divided by v^2

$m = \frac{2KE}{v^2}$
