

Circles and Parabolas

Circles

- 1 Write the standard-form equation of the circle with center $(3, -2)$ and radius 5.
 - 2 Consider the circle $x^2 + y^2 - 6x + 4y - 12 = 0$.
 - a Write the equation in standard form by completing the square.
 - b State the center and radius.
 - 3 Determine whether the point $(6, 2)$ lies inside, on, or outside the circle $(x - 3)^2 + (y + 2)^2 = 25$.
-

Parabolas with vertex at the origin

- 4 For the parabola $y^2 = 8x$, find:
 - a the focus
 - b the directrix
 - c the direction of opening
- 5 A parabola has vertex at the origin, opens upward, and passes through the point $(4, 2)$.
 - a Find its equation in the form $x^2 = 4py$.
 - b State the coordinates of the focus.
- 6 A satellite dish has a parabolic cross-section 2 m wide and 0.5 m deep. Taking the vertex at the origin opening upward, find the distance from the vertex to the focus (where the receiver is placed).
